Hi Robert and Mike,

Thanks so much for setting this up. We haven't done a lot of coverage on the listing yet, so much of what I'm curious about is basic: what are the goals for the cleanup, what's been done so far, how is the EPA consulting with Columbia Falls, who/which agency is responsible for which aspect of the cleanup, what's the EPA's role, etc.

The big fear I'm hearing is people don't know if they can drink their tap water. I'd like to talk about that – who's measuring what, and where? Is the water safe to drink? If it's not, what resources are available to residents?

Montana has a long history of Superfund sites, some of which have been in limbo for decades. How will the CFAC site be different? What's being done to ensure speedy cleanup?

What are some of the short- and long-term impacts of a Superfund listing? I'm thinking environmental quality, property values, local tourism industry, etc.

Is there anything you think I should be asking you?

Thanks and Mike, please let me know what time you're thinking for Thursday. I'm looking forward to meeting you.

Nicky

**Subject:** follow up

Hi Nicky,

Just a quick follow up so that we can be better prepared for your interview. Can you provide a list of topics/questions that you will be covering? Thanks so much!
